Shravan Nemane

Data Analyst | Python · SQL · Power BI · Tableau · Excel
shravannemane15@gmail.com · +91-7248930949 · linkedin.com/in/shravannemane · github.com/shravannemane15 · Nashik, India

SUMMARY

Final-year AI & Data Science student with internship experience in data analytics and hands-on project work across financial operations, customer behavior, cryptocurrency markets, and e-commerce. Proficient in Python, SQL, Power BI, and Tableau — with a track record of turning raw data into dashboards and insights that drive business decisions.

TECHNICAL SKILLS

Languages: Python · SQL · JavaScript · C/C++ · HTML/CSS
Analytics & BI: Power BI · Tableau · Microsoft Excel · Google Sheets
Libraries: Pandas · NumPy · Matplotlib · Seaborn · Scikit-learn
Databases: MySQL · Google Cloud Platform
Tools: Git · Jupyter · VS Code · PyCharm · Anaconda
Methods: EDA · ETL · Statistical Analysis · Data Storytelling · KPI Reporting · Business Intelligence · Trend Forecasting

EXPERIENCE

Data Analyst Intern | *Elevance Skills* July 2026 (1 month)

- Led end-to-end cryptocurrency market analysis project, collecting and cleaning historical price data for 10+ crypto assets using Python (Pandas, NumPy), ensuring 95%+ data consistency prior to analysis.
- Built interactive Power BI and Tableau dashboards visualizing crypto price trends, volatility indices, and trading volume KPIs — enabling stakeholders to track market movements at a glance.
- Performed statistical analysis and trend forecasting on crypto time-series data using Matplotlib and Seaborn, identifying key market patterns and presenting findings as a stakeholder-ready report.
- Wrote optimized SQL queries to extract and aggregate structured crypto transaction data, applying ETL best practices to prepare clean datasets for downstream dashboard reporting.

Data Analyst Projects & Self-Learning | *Independent* Aug 2023 – Present

- Built and deployed 3 end-to-end analytics and development projects spanning financial operations, customer behavior, and e-commerce using Python, SQL, Power BI, Tableau, JavaScript, and Jupyter Notebook.
- Applied ETL best practices to clean, transform, and load structured datasets of 30,000–50,000+ records, improving data accuracy by 95%+ across both data projects.
- Practiced version control using Git and GitHub across all projects, maintaining clean commit history and reproducible workflows.

PROJECTS

Financial Operations Analysis | *Python, SQL, Power BI, Tableau, Jupyter* March 2025

- Delivered end-to-end financial operations analysis by building Power BI dashboards tracking 6 KPIs (revenue trends, cost variance, operational efficiency), reducing manual reporting effort by an estimated 40% through Python-based ETL automation using Pandas and NumPy.
- Improved data accuracy by 95%+ as measured by pre/post cleaning error rates, by engineering a data pipeline that extracted, transformed, and loaded 50,000+ raw financial records using SQL joins, aggregations, and Python scripts in Jupyter Notebook.
- Accelerated insight delivery by 60% as measured by stakeholder reporting turnaround, by designing interactive Tableau and Power BI dashboards with drill-down filters — translating raw data into business intelligence for non-technical audiences.

Customer Behavior Analysis | *Python, SQL, Power BI, Tableau, Jupyter* 2024

- Enabled data-driven customer retention decisions as measured by dashboards monitoring churn rate, retention rate, and CLV across 3 customer segments, by writing optimized SQL queries to analyze 30,000+ transaction records and surface behavioral patterns.
- Processed and transformed raw customer data using Pandas and NumPy, achieving 95%+ data consistency as measured by pre/post EDA validation checks across 30,000+ records.
- Strengthened statistical analysis foundation by applying correlation analysis, trend identification, and outlier detection using Matplotlib and Seaborn — findings presented as a stakeholder-ready report in Excel and Power BI.

SnapCart — E-Commerce Web Application | *JavaScript, HTML, CSS* 2025

- Designed and developed a highly visual e-commerce web application from scratch, enabling users to browse and purchase multiple items with a seamless, intuitive shopping experience.
- Built a dynamic product listing and cart management system using vanilla JavaScript, handling real-time UI updates, item quantity controls, and order totals without any external frameworks.
- Engineered a responsive, mobile-first UI using HTML and CSS with a focus on user experience (UX) principles — clean layout, fast load interactions, and visually consistent product displays across screen sizes.

EDUCATION

Bachelor of Engineering — Artificial Intelligence & Data Science | *KK Wagh Institute of Engineering Education and Research, Nashik* Aug 2023 – May 2027 (Expected)

Relevant Coursework: Data Structures, DBMS, Data Analytics, Statistical Analysis, Machine Learning Fundamentals.
